FASEB RELEASES UPDATED SURVEY DATA ON EDUCATION AND EMPLOYMENT IN THE BIOLOGICAL AND MEDICAL SCIENCES

Bethesda, MD – FASEB has updated its compilation of survey data on education and employment in the biological and medical sciences with newly released information from the National Science Foundation (NSF) Survey of Earned Doctorates, NSF Survey of Graduate Students and Postdoctorates, the National Institutes of Health web site, and other national data sources.

The detailed presentations from these and other surveys, include data on graduate enrollment, doctoral awards, postdoctoral appointments and employment in the life sciences. This information is provided as a service to FASEB member societies and the biomedical research community. FASEB encourages its member society scientists, advocacy and policy partners, and other interested parties to use the graphs and figures in their own presentations or publications. The data may be viewed on the FASEB web site at <http://www.faseb.org/Policy-and-Government-Affairs/Data-Compilations/Education-and-Employment-of-Scientists.aspx>.

FASEB is composed of 23 societies with more than 100,000 members, making it the largest coalition of biomedical research associations in the United States. FASEB enhances the ability of scientists and engineers to improve—through their research—the health, well-being, and productivity of all people. Our mission is to advance health and welfare by promoting progress and education in biological and biomedical sciences through service to our member societies and collaborative advocacy.
